

## PENCIL BRUSHES

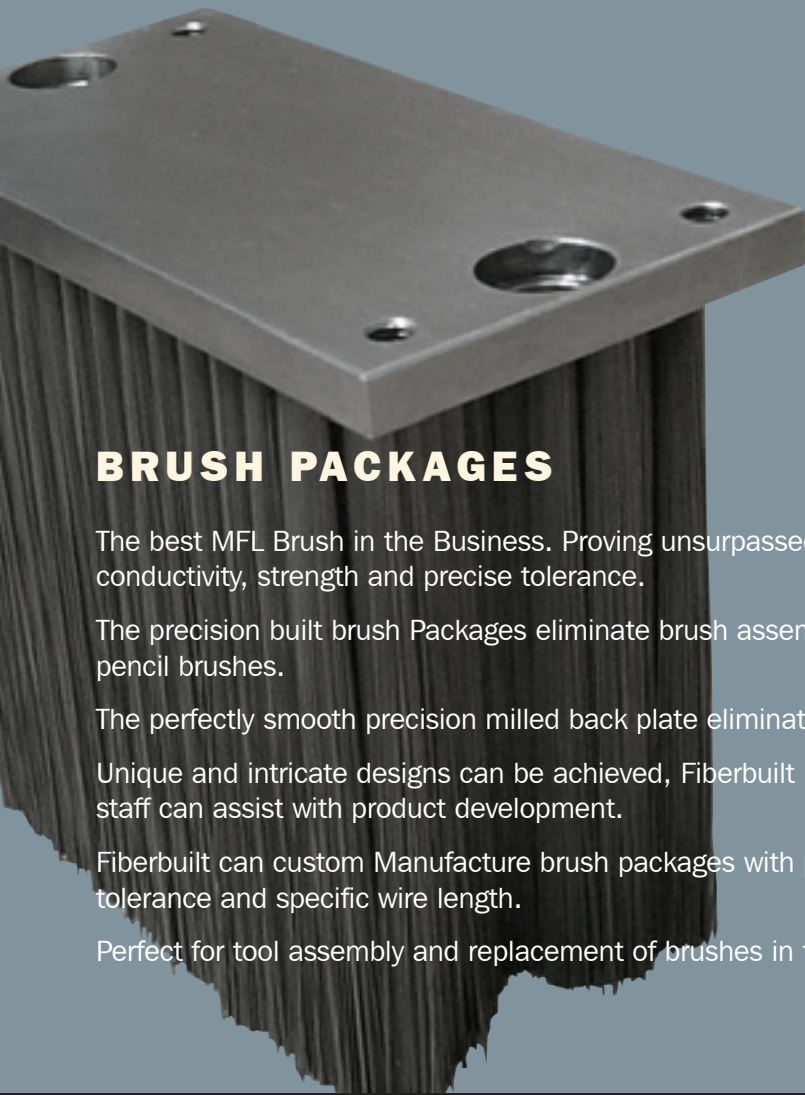

The strength in wire retention provided by our Patent Pending Manufacturing process unsurpassed.

There is no soldering or bending of wires in the process.

No blooming or flaring of the wire tuft particularly for larger diameter wires.

Our unique design provides direct (wire) contact between the tool and the pipe wall.

No grinding of wire ends to trim brush. Grinding causes heat distortion of wires and loss of specified properties.

## BRUSH PACKAGES

The best MFL Brush in the Business. Proving unsurpassed magnetic conductivity, strength and precise tolerance.

The precision built brush Packages eliminate brush assembly using pencil brushes.

The perfectly smooth precision milled back plate eliminates air pockets.

Unique and intricate designs can be achieved, Fiberbuilt Engineering staff can assist with product development.

Fiberbuilt can custom Manufacture brush packages with precision tolerance and specific wire length.

Perfect for tool assembly and replacement of brushes in the field.

## SPIRAL BRUSH

The Fiberbuilt Spiral Brushes are ideal for smaller diameter tools.

Precision manufactured ID and OD dimensions.

Fiberbuilt spiral brushes are available as coils or solid packages where the coils are welded together ensuring a solid high performing MFL Brush.

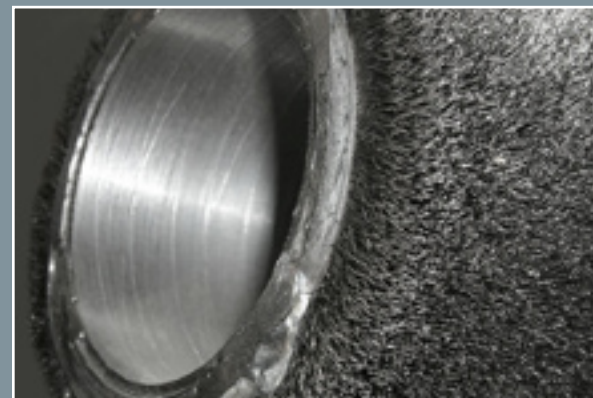

Available in OD sizes, 2" to 52"

Repeatable production allows for consistent data collection.

## CAN BRUSHES

Spiral Brushes Wrapped on an internal core. Same fundamentals as Spiral Brushes but the internal core allows for slightly more density in the brush and easier to put on and remove from the MFL tool.

## CUSTOM MFL BRUSHES

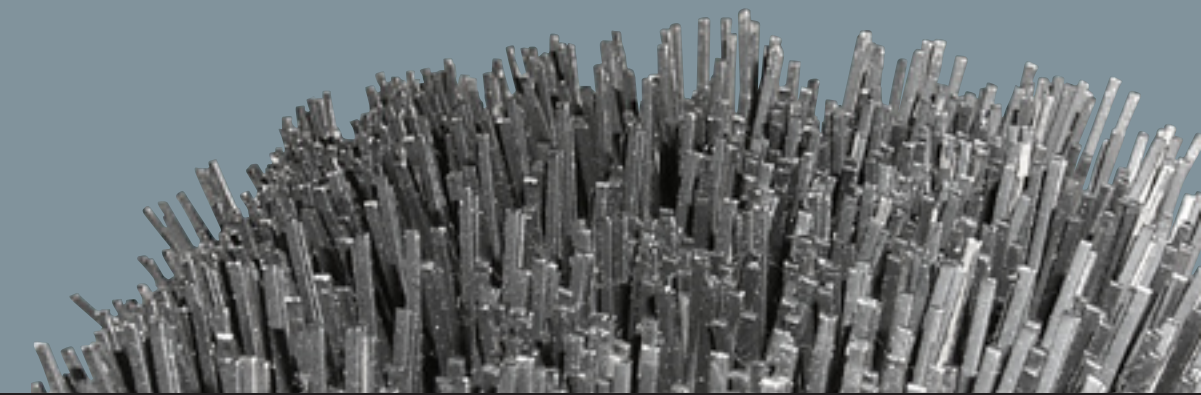

In most every case an MFL run is a unique venture. Seemingly every pipeline has it's own unique characteristics and make up. With our own in house wire-processing department Fiberbuilt can produce specific wire lengths and diameters as required for each job. No need to settle with set inventory brush items. Fiberbuilt can quickly and efficiently produce brushes to your exact specifications to fit your tools and the pipeline.

## CLEANING BRUSHES

FIBERBUILT Cleaning Brushes are made from a verity of materials specifically to suite your particular requirements. High tensile steel wires, fine wires and wire rope are used plus non-scratching synthetic fibers.

Our manufacturing capability produces Brushes of any size and intricate shapes. Let us know about your requirements and we will produce a brush that will meet and exceed your expectation.

**FIBERBUILT MFL  
BRUSHES HAVE  
BEEN EXTENSIVELY  
PROVEN FOR BEST  
MAGNETIC FIELD  
TRANSFER. THEY  
ARE ECONOMICAL  
AND CONSISTENT IN  
DATA COLLECTION.  
MADE TO  
YOUR EXACT  
SPECIFICATION.**
