Spiral Coil Brush

- Designed for high speed applications that require constant brush pressure and contact for a thorough clean
- Wide selection of 'no scratch' brush filaments to ensure glass is cleaned and polished
- Manufactured with strict material tolerances to not remove the anti-reflective layers; such as silver on low-e glass
- Various densities to allow for self-cleaning and uniform coverage
- Brushes can also be used in assembly lines and for glass transport to reduce handling and damage

Fiberbuilt provides three manufacturing options:

- Re-bristle existing cores
- Manufacture a new core and spiral brush
- Convert zig-zag patterns to a spiral brush for better coverage and longevity
